

Multispectral remote sensing provides radically new perspectives on the health and vigor of crops. It allows growers and agronomists to detect areas of stress in a crop and manage these issues immediately. It enables precise application of nutrient inputs and disease preventative actions based on the actual field conditions today.

Actionable data when you need it!

Benefits of remote sensing:

- Actionable crop information when you need it.
- Improve crop health and effecenty.
- Improve irrigation effecenty and track environmental factors.
- Your entire farm at your fingertips.

For less then \$10/acre Drone For Hire can provide Multispectral data to help your crops thrive.
